INSTALLATION AND COMMISSIONING

- Check inlet pressure. It must not exceed 500 mbar.
- Fit the regulator respecting the gas flow. See flow arrow on the bottom of the regulator.
 - Once the regulator is in place, check that there are no leaks at the regulator connections.
- With all consumption points downstream of the regulator closed, open the gas tap upstream of the regulator.
 - In the case of automatic VIS MIN, wait a few seconds (approx. 15-20) until the VIS is reset.

In case of manual VIS MIN, actuate the reset device on the controller (by pulling on it) for about 2 seconds.

The regulator will start to regulate when there is any demand for consumption.
