INSTALLATION AND COMMISSIONING

- Check the inlet pressure. It must not exceed 6 bar.
- Fit the regulator respecting the gas flow. See flow arrow on the bottom of the regulator.
 - If the regulator has a relief line and is installed indoors, the relief must be piped to the outside through the corresponding pipe connection.
 - Once the regulator has been installed, check that there are no leaks at the regulator connections.

With all consumption points downstream of the regulator closed, open the gas tap upstream of the regulator.

If the regulator is equipped with automatic VIS MIN, wait a few seconds (approx. 15-20) until the VIS is reset.

In the case of manual VIS MIN, act on the reset device on the regulator (by pulling on it) for about

The controller will start to regulate when any consumption demand occurs.
